

Borislav Grigorov

Self-driven, adaptable **DevOps & Software engineer** with 10+ years of experience. Builds production software and cloud infrastructure on AWS and GCP, with depth in **Go**, TypeScript, **Kubernetes**, **Security**, CI/CD, and Web3. Uses AI to accelerate projects from ideation to production, and ships systems that are secure, scalable, and maintainable.

WORK EXPERIENCE

- Consensys** (MetaMask) 📍 Seattle, WA
Sr DevSecOps Engineer II 📅 Sep 2024 – Oct 2026
- Managed **AWS** platform: Terraform/Atlantis, EKS, shared CI/CD and ArgoCD for Go and Node.js services. Created reusable shift-left pipelines and infra scanning.
 - Browser extension releases: Led RAPID architectural designs, threat modeling, and production keyless submission for MetaMask extension.
 - Service onboarding automation: agent scaffolding new workloads into existing platform covering app code, pipelines, deployment manifests.
 - Decreased service onboarding from weeks to < 1 day.
 - Delivered crypto wallet management **Node.js** Lambdas covering transactions, claims, swaps. Performed security hardening and threat analysis as scale increased.
- Synapse Protocol** 📍 New York, NY
Sr DevOps Engineer 📅 2023 – 2024
- Worked for a 10-person web3 startup supporting apps for Synapse Protocol.
 - Managed **GKE** clusters, deployed workloads with Helm, Teleport and GHA.
 - Handled security, monitoring, alerting, backups, and scaling of GCP infrastructure.
 - Deployed and maintained RPC nodes for EVM chains.
- Coinbase** 📍 Orange, CA
Sr Blockchain Engineer 📅 2022 – 2023
- Provisioned, upgraded and monitored (on-call) blockchain nodes and validators for **Bitcoin**, **Cosmos**, **Avalanche**, Helium and Flow in k8s.
 - Onboarded new blockchains Aptos and Sui to the Cloud platform.
- SAP** 📍 Newport Beach, CA & Vancouver, BC
Sr Software Engineer 📅 2016 – 2022
- Built infrastructure for cloud-native ERP running Kubernetes on **GCP** and AWS.
 - Delivered k8s operators in Go, CI/CD, cluster management and monitoring.
 - Architected, delivered, and maintained Jira DC on k8s for **2000+ users**.

TECHNICAL PROJECTS

- SynKube** – secure cloud platform | synkube.com 2024 – now
- Multi-cloud platform on DigitalOcean, AWS, GCP, and k3s (Contabo VPS)
 - Stack: Terraform Cloud, k8s, GitOps, Traefik, Cloudflare, InfluxDB, Grafana Cloud.
 - Delivery pipeline: GitHub Actions → GHCR → ArgoCD; Reusable Helm charts, app templates (Go, Node.js, Python), and OIDC-style GitOps access.
 - Security model: Shift-left (CodeQL, Trivy, KICS, Dependabot) and defense-in-depth on-cluster: Cosign + Sigstore policy-controller, Kubescape, Falco runtime detection.
- Agent Platform** – synkube.com/agents 2026
- Hermes AI agents platform with context, skills, bootstrap and memory management
 - GitHub auth broker and identity broker for ephemeral GitHub and Cloud IAM access.
- Algorand Global x402 Challenge** – x402.darkhold.dev 2026
- News aggregation API and x402 agentic payments via USDC.
 - Deployed on Cloudflare workers, D1 and Algorand Mainnet.
- Agent knowledge base & skills registry** 2025 – now
- Personal KB and curated agent skills for multi-agent delivery and velocity accelerator.
- Blockchain Indexer (Go)** 2024
- Concurrent EVM indexer in Go; PostgreSQL and ClickHouse; GraphQL API; GoReleaser.
- Personal Website** – bgrigorov.com Next.js site deployed on Vercel 2022
